Version 2.0.22

Maritime Sea-Service Record App

Website: sealogmarine.com

Support: support@sealogmarine.com

1. Welcome to SeaLog

SeaLog is designed for seafarers to keep their sea-service and port-call records organized on their mobile device.

With SeaLog you can:

- Maintain your seafarer information
- Record vessel sea-service periods
- Record sign-on and sign-off details
- Record port calls
- Save port coordinates
- View ports on the map
- Calculate total sea service
- Create a Sea-Service Profile PDF
- Protect the app with biometric security
- Create a local backup of your SeaLog data
- Import a previous backup
- Manage your account, privacy and security settings

2. Getting Started

2.1 Create a SeaLog Account

1. Open SeaLog.
2. Select **Create Account**.
3. Enter your email address and password.
4. Complete the account creation process.
5. Check your email for the verification message.
6. Verify your email address.
7. Return to SeaLog and sign in.

Important: Keep your SeaLog login email and password safe.

3. Signing In

After your account has been verified, enter your email address and password and select **Sign In**.

You normally do not need to verify your email every time you log in.

If biometric app lock has been enabled, you may also be able to unlock SeaLog using the biometric security configured on your device.

4. Dashboard

The Dashboard provides an overview of your SeaLog records.

- Your seafarer information
- Total sea service
- Vessel/service information

- Port-call information
- Recent activity

The Dashboard helps you quickly understand the information currently stored in SeaLog.

5. Seafarer's Information

Go to **Profile** → **Seafarer's Information**.

You can maintain information such as:

- Full name
- Date of birth
- Passport number
- Seaman book
- Company name
- Place of birth

Keep this information accurate because it may be used when creating your Sea-Service Profile PDF.

6. Sea-Service Records

SeaLog allows you to maintain your vessel service history.

A service record contains information such as:

- Ship name
- Call sign
- IMO number
- Ship type
- Flag
- Rank
- Sign-on date
- Sign-on port and country/state
- Sign-off date, port and country/state

Adding a Service Record

Enter the vessel and service information and save the record.

If you are still serving on the vessel, the service can remain active without a sign-off date.

7. Sign-On and Sign-Off

Sign-On

Enter the actual date and port where you joined the vessel.

Sign-Off

When your service ends, enter your actual sign-off date and port.

Current Vessel

If you are currently onboard a vessel, the sign-off date may remain empty. SeaLog treats an active service period as ongoing and can calculate the service up to the present date.

8. Starting a New Vessel

If you start a new vessel while an earlier service record is still active, check the previous record carefully.

The previous vessel should contain the actual sign-off date once that service has ended.

This prevents overlapping or incorrect service periods.

9. Sea-Service Calculation

SeaLog calculates sea service using the calendar-month method.

- Complete calendar periods are treated as months.
- Remaining days are calculated separately.
- 30 days = 1 month for the remaining-day conversion.
- A 31-day calendar month does not create an additional service day.

Sea service is displayed as: **X Years, Y Months, Z Days**.

For an active vessel without a sign-off date, SeaLog calculates the service through the current date.

10. Port Calls

Each port-history entry represents an actual port call.

A port call can contain:

- Port name
- Country
- State/region
- Arrival date
- Departure date
- Arrival time
- Departure time
- Latitude
- Longitude
- Company
- Voyage/trade
- Comments

You can add port calls to a service record without changing the vessel's sign-off date.

11. Coordinates and Map

SeaLog can associate a port call with geographical coordinates.

When coordinates are available, the port can be displayed on the SeaLog map.

The Map screen provides:

- Mapped ports
- Port-call information
- Port markers
- Port-call history
- Map navigation

When several port calls are located close together, SeaLog can group them so the map remains easier to understand.

12. Locate My Position

SeaLog includes **Locate My Position** for obtaining your current position when adding or editing port information.

The device must have location services enabled and location permission granted to SeaLog.

If an accurate position cannot immediately be obtained, SeaLog may use an available recent position where appropriate.

Your device's location permissions remain under your control through Android/iOS settings.

13. Records

The **Sea Service Records** section allows you to view your saved service history.

- Search records
- Open individual service records
- Review vessel information
- Review port calls
- Edit information
- Check service dates

Always review your records for accuracy.

14. PDF / Sea-Service Profile

SeaLog can generate a PDF containing your sea-service profile and relevant recorded information.

Before generating the PDF, check that your personal information, vessel records, sign-on/sign-off dates and port information are correct.

The generated PDF can be shared using the device's available sharing options.

15. Biometric App Lock

SeaLog supports biometric protection where supported by your device.

Go to **Profile** → **Privacy & Security**. You can enable biometric app protection if your device supports it.

Your device must have an appropriate biometric method configured, such as fingerprint or Face ID/compatible biometric authentication.

If biometric authentication is unavailable, check your device security settings.

16. Privacy

SeaLog includes privacy and security information inside the Profile section.

Go to **Profile** → **Privacy & Security** and **Profile** → **Documents** → **Privacy Policy**.

Read the Privacy Policy for information about how SeaLog handles user information.

17. Data & Backup

Go to **Profile** → **Data & Backup**. SeaLog provides local backup tools.

Local Data Backup

Select **Local Data Backup**. You will be asked to create a backup password. Use a strong password and remember it. The backup file should be kept somewhere safe.

Import Data

Select **Import Data**. Choose your SeaLog backup file and enter the required backup password. Only use a backup created for SeaLog.

18. Protect Your Backup

Your backup file is your responsibility.

Keep your backup file safe and do not share it with others.

Do not lose the backup password. Without the correct backup information/password, restoring your backup may not be possible.

SeaLog cannot guarantee recovery of data that is lost from your device when you do not have a usable backup.

19. Account

Go to **Profile** → **Account**. The Account section provides:

- Support
- Delete Account
- Sign out

20. Support

For assistance, contact SeaLog: **support@sealogmarine.com**.

Website: **sealogmarine.com**.

When contacting support, describe the problem clearly and include relevant information such as the SeaLog app version and the steps that caused the problem.

Do not send your password or backup password to anyone.

21. Delete Account

If you choose **Delete Account**, carefully read the confirmation message before proceeding.

Deleting your account permanently removes your cloud account and synced SeaLog records.

Account deletion is a permanent action.

22. Sign Out

Use **Sign out** when you want to leave the current SeaLog account.

If you use SeaLog on a shared or another person's device, always sign out when finished.

23. Light and Dark Mode

SeaLog follows your device's system appearance setting.

- Light mode → SeaLog uses Light mode.
- Dark mode → SeaLog uses Dark mode.

There is **no separate manual theme switch** inside SeaLog.

24. Important Data Safety Information

SeaLog is designed to help you maintain your sea-service records, but **you are responsible for keeping your information and backups safe.**

Recommended practice:

- Keep your SeaLog information accurate.
- Regularly create a local backup.
- Keep the backup file somewhere safe.
- Remember your backup password.
- Do not share your backup password.
- Do not share your SeaLog login password.
- Keep your phone protected with a secure device lock.
- Keep SeaLog updated when new versions become available.

25. Common Problems

I cannot create or verify my account

Check your internet connection, email address, email inbox, spam/junk folder and verification email. If the problem continues, contact SeaLog Support.

I cannot use biometric protection

Make sure your device supports biometric authentication, a supported biometric method is configured, and SeaLog has the required permission.

My location cannot be found

Check that location services are enabled, SeaLog has location permission, and you are in a location where the device can obtain a position.

My backup cannot be imported

Check that you selected the correct SeaLog backup file, the file has not been damaged or modified, and you entered the correct backup password.

My PDF cannot be generated/shared

Check your device storage and permissions, then try again. If the problem continues, contact SeaLog Support.

26. Before You Rely on Your Records

SeaLog is a record-keeping tool.

Always verify important information such as dates, vessel names, IMO numbers, rank, ports, coordinates, sign-on/sign-off information and total sea-service calculation.

For official submissions or professional requirements, verify that the information meets the requirements of the relevant authority, company or organization.

27. Legal Information

SeaLog's current legal documents are available from **Profile** → **Documents**, including the Privacy Policy and Terms & Conditions.

Please read the applicable legal documents for the complete terms governing use of SeaLog.
